

TIME4ID MOBILE

YOUR PUSH AUTHENTICATION MOBILE APP

The Time4ID Mobile App offers an **innovative two-factor authentication**, a fast approval system and the possibility to use digital signature, all from your smartphone (iOS, Android). Time4ID Mobile is **configurable and customizable** with your brand; the App is published and updated by Intesi Group throughout its life cycle. Time4ID responds to the current security needs of the Italian market (for example, SPID - Public Identification System) and international needs such as PSD2 and BCE Recommendations for online payment security.

IT'S NOBODY ELSE, BUT YOU.

Protect your digital identity.

**YOUR PUSH AUTHENTICATION
MOBILE APP**

EVERYTHING ON YOUR SMARTPHONE

Let's make it easier! No more passwords and codes. Time4ID Mobile **accelerates processes**. By answering a simple push notification on your smartphone you will be able to: log in your systems with two factor authentication (strong authentication), answer to a request for approval, and sign a document.

THE APP WITH YOUR BRAND

We put the engine, you choose the bodywork! Intesi Group customizes your App with ad hoc content and your **corporate identity** (logo, colors, images). Furthermore, Time4ID integrates with your authentication system, so that only your users can access the application using pre-existing credentials.

MAXIMUM SECURITY

Time4ID uses bank level security and is compliant to Italian and European regulations: the **encryption** is based on certified hardware devices (HSM) and data is encrypted. Each user has a unique token to generate an OTP (One Time Password) that is also protected on the smartphone from brute-force attacks.

WE TAKE CARE OF EVERYTHING

Intesi Group offers a **full service approach** from configuration to publication of your Mobile App on the three platforms: Android, iOS and Windows Phone. The App is published with ad hoc text and images. The entire life cycle of the App is run by Intesi Group: maintenance and updates (system and regulatory) are included!

Features out-of-band mode with push notification / explicit OTP/implicit OTP / transaction authentication (OTP signature) / multitoken support for different uses / multidevice support with Master device + Backup / innovative seed encryption on mobile devices / seed protection with Hardware Security Module on backend / antifraud data / device reputation / encrypted communication channels / data center ISO27001 with high availability and disaster recovery / TouchID protection
