Token migration procedure via Valid App

When you change your device, you have to migrate your tokens from the old device to the new one.

First of all download and open the mobile App Valid on the new device and click on the “Setting” button on the bottom menu:

In the Settings page select “Import” under the “Migration” tab :

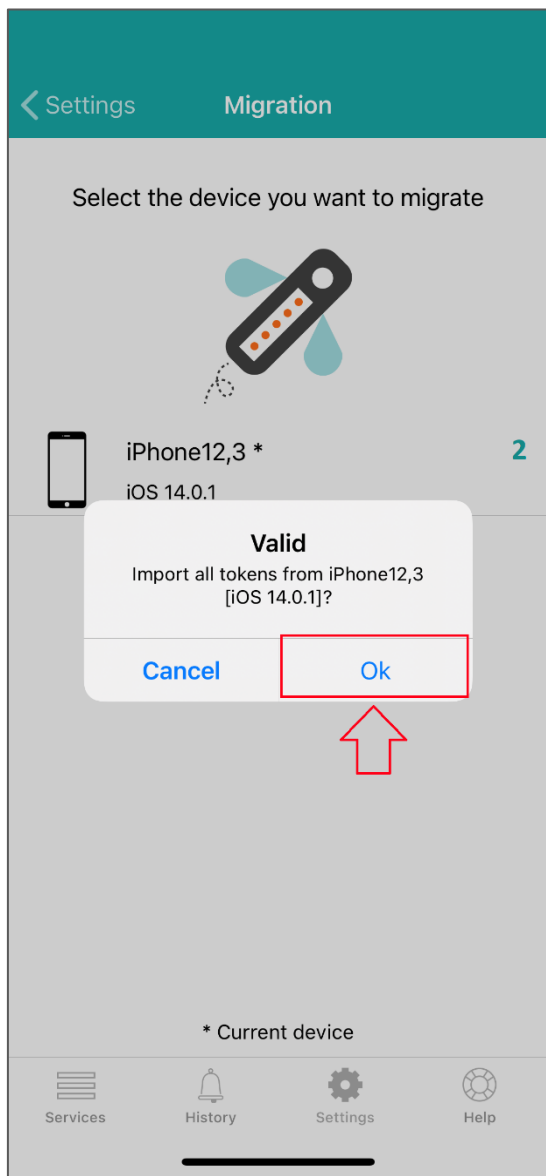

A new page opens. It shows your old device.

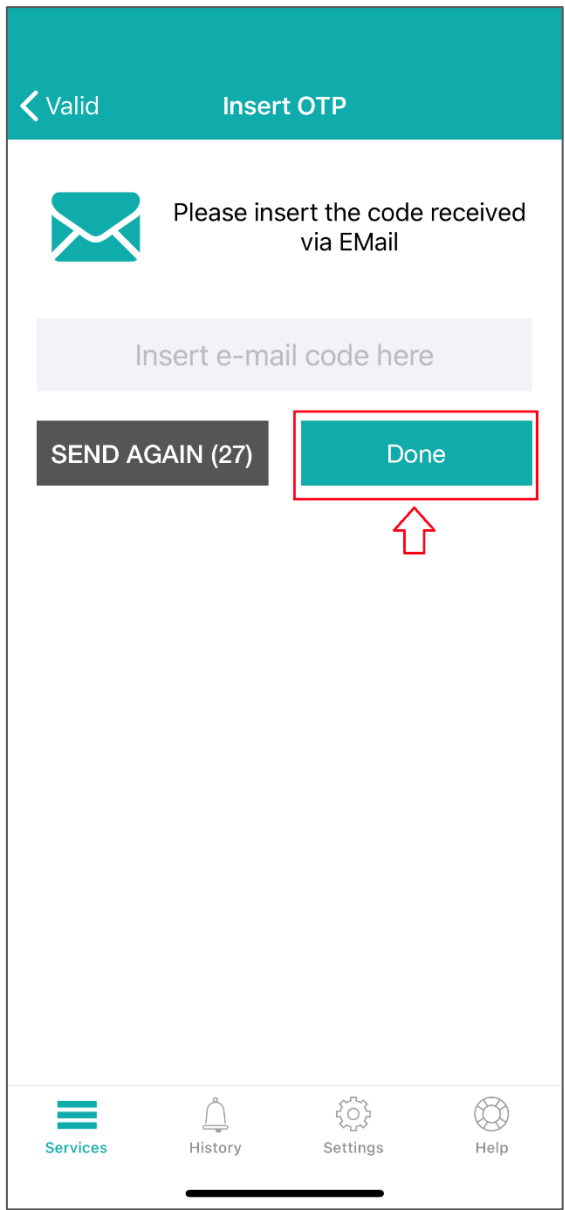

Click on it to migrate certificates to your new device:

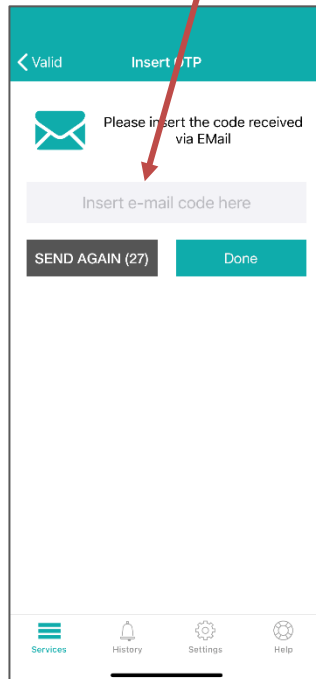

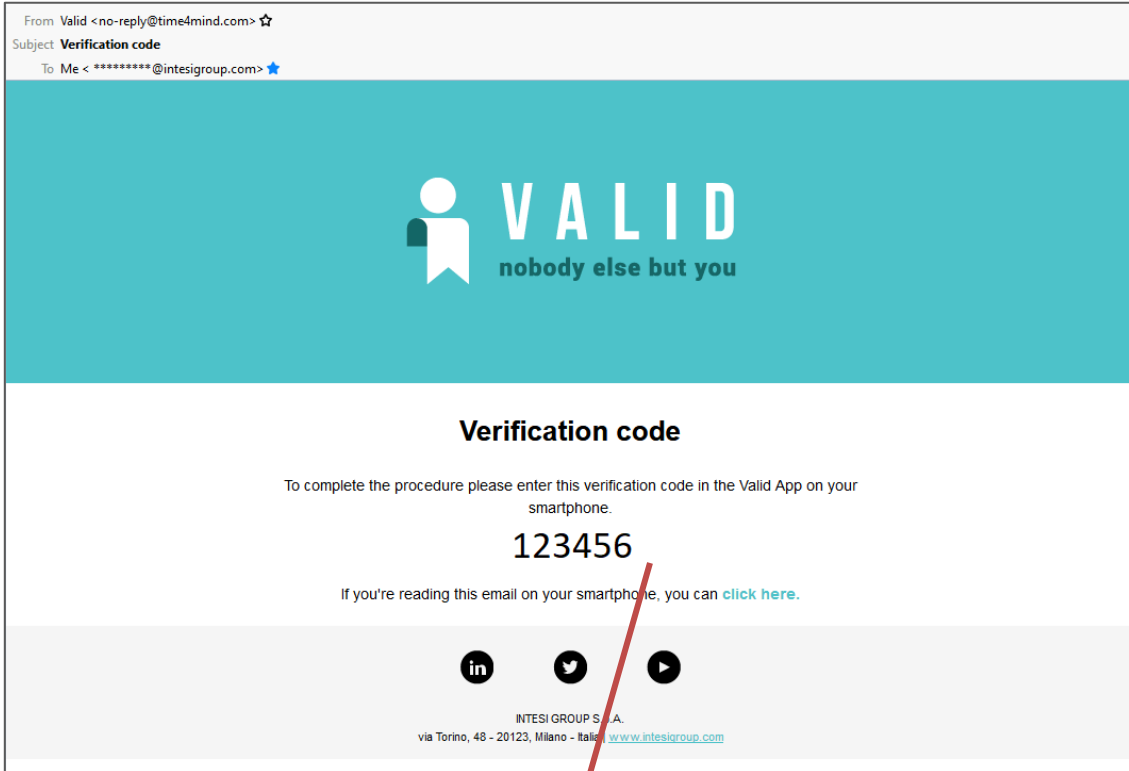

On the open pop-up, click on the "Ok" button for starting migration:

By selecting "OK" you will be asked to enter the OTP code received via email to finish the procedure:

The OTP code received in the following email must be inserted into the app:

Once the OTP is inserted, the tokens on the device will be reloaded in the app:
