

Intesi Group Joins the Good Health Pass Collaborative

Bringing expertise in electronic signatures and electronic identities to the global effort for globally interoperable digital health passes.

Milano, 8 April 2021 – Intesi Group is proud to announce that it has joined the [Good Health Pass Collaborative](#), an open, inclusive, cross-sector initiative – launched in February 2021 by [ID2020](#) – to **create a blueprint for globally interoperable digital health passes.**

While the curve of the COVID-19 virus is flattening in many regions, we are all looking for solutions which will allow us to create a new post-pandemic reality, plan for an incremental return to public life, participate in the economy, and work and freely travel again.

Digital health passes – if properly designed and implemented – could offer a path back to some semblance of our pre-pandemic lives, but will require active collaboration between governments, the private sector, and civil society.

With more than 20 years of expertise in technology and regulatory requirements for electronic signatures and electronic identities, Intesi Group is participating in the working groups that have been established to collectively address specific interoperability challenges as part of the Good Health Pass Interoperability Blueprint, which will be published in June.

“Intesi Group is thrilled to join Good Health Pass Collaborative initiative and actively contribute with its knowledge and expertise to a joint effort in restoring international travel and global economy. Trust, Equity, Collaboration, Interoperability were the bedrock of Intesi Group digital services for the past 20 years. These values will continue to light our path for a better and collective good digital health passes.” **Viky Manaila**, Trust Services Director, Intesi Group

Over the past year, numerous commercial and governmental efforts have come together to develop digital health credentials systems – both for proof of vaccination and test results. The Good Health Pass Collaborative was established to help weave these efforts together, fill gaps where they exist, enable collaboration among a new ecosystem of stakeholders, and ensure that digital health pass systems are designed to work together.

“Much like the development of COVID-19 vaccines, the effort to develop globally interoperable digital health pass systems will require unprecedented collaboration across numerous sectors,” said ID2020 head of advocacy and communications, **Ethan Veneklasen**. *“We are delighted to welcome Intesi Group to the Collaborative and are grateful for their partnership and support of this important effort.”*

The Collaborative was born out of a recognition it was unlikely that one solution would be implemented globally – or even across the entire travel industry. Since February, the initiative has brought together more than 100 companies and organizations – many of them competitors – to

jointly establish guiding principles and open standards that will ensure that the systems that are adopted are privacy-protecting, user-controlled, equitable, interoperable, and universal accepted for international travel.

About Intesi Group

Intesi Group is an Italian privately-owned company that offers state-of-the-art products and solutions for logical data security on the global market since 1998. With a 2020 turnover of 14 million euros and significant investments in research and development, Intesi Group is the ideal partner for a complete Digital Transformation. Intesi Group is a Qualified Trust Service Provider according to EU eIDAS Regulation. Digital Signature, Authentication and Encryption are the three pillars of Intesi Group's offer, in addition to system integration services and solutions design. www.intesigroup.com

About ID2020

ID2020 is a global public-private partnership that harnesses the collective power of nonprofits, corporations, and governments to promote the adoption and implementation of user-managed, privacy-protecting, and portable digital ID solutions.

By developing and applying rigorous technical standards to certify identity solutions, providing advisory services and implementing pilot programs, and advocating for the ethical implementation of digital ID, ID2020 is strengthening social and economic development globally. Alliance partners are committed to a future in which all of the world's seven billion people can fully exercise their basic human rights, while ensuring data remains private and in the hands of the individual.
